

24. Design a C program to demonstrate UNIX system calls for file management.

Code:

```
main.c | sample.txt |  
1 #include <stdio.h>  
2 #include <fcntl.h>  
3 #include <unistd.h>  
4  
5 int main() {  
6     int fd;  
7     char msg[] = "Hello World";  
8  
9     fd = open("sample.txt", O_CREAT | O_WRONLY, 0644);  
10  
11     if(fd < 0) {  
12         printf("File Creation Failed\n");  
13         return 0;  
14     }  
15  
16     write(fd, msg, sizeof(msg) - 1);  
17  
18     printf("Data Written to File\n");  
19  
20     close(fd);  
21  
22     printf("File Closed Successfully\n");  
23  
24     return 0;  
25 }
```

Output:

```
Data Written to File  
File Closed Successfully  
  
...Program finished with exit code 0  
Press ENTER to exit console.
```
